Env+Tech Report

As requested in your Corrective Action Response and Report Requirements (CARRR), the following information is provided to fulfill the 20-day reporting requirement. This information is provided in the same numerical sequence used in the CARRR request:

1. The released material was diesel fuel. The exact volume released is estimated to be between 100 and 200 gallons.
2. Refer to the enclosed map for UST locations, etc.
3. Refer to enclosed drawings for monitor well locations.
4. Land use in the area is primarily agricultural except for two large truck terminals which are connected to city-supplied water and sewer.
5. No analytical results are available.
6. No photographs have been taken.

Additional items:

1. A small crack in the top of the tank has been repaired.
2. All free product that accumulates in the monitor well is bailed out.
3. The extent of contamination has tentatively been identified by soil borings. It does not appear that any subsurface structures have been impacted.

Illinois EPA
July 23, 1991
Page Two

4. A site investigation (soil borings) has been undertaken to assess subsurface conditions. Subsequent to a review of available data, a corrective action plan will be prepared.
5. Soil borings advanced in the tank cavity indicate a pea gravel backfill material with native soils consisting primarily of interbedded sands, silts and clays. No groundwater was encountered to a depth of 22 feet. Soil samples were field screened utilizing a P.I.D. meter.
6. See item 5 above.

If you have any additional questions please contact me at 216/258-2443.

Very truly yours,

RECOMMENDATIONS AND LAYOUT

Two of the buildings have been abandoned by the city. One, formerly a city garage, is now used as a warehouse for the city's fire department. The other, formerly a city garage, is now used as a warehouse for the city's fire department. The city has also abandoned the building formerly used as a city garage, which is now used as a warehouse for the city's fire department.
